C Series Valves

C Series Hydra-Cell Valves bypass system fluid to prevent excess system pressure. When a system discharge is completely closed — such as a closed spray gun, closed valved or plugged nozzle — the Hydra-Cell Valve bypasses the total system fluid flow. They also balance system pressure for multiple-gun operations.

The Hydra-Cell Valve design is simple: a tapered plunger with a valve seat. When excess pressure overcomes the adjustable spring pressure on the plunger, the plunger lifts off the seat, allowing fluid to bypass and reduce system pressure. When a Hydra-Cell Valve is mounted in the discharge line, its modified flow-through design reduces wear on the plunger and seat. Baffles on either side of the plunger and seat extend life by directing the flow around these internal components.

For service, simply remove the top of the body and replace the worn internal components. Hydra-Cell Valves can be serviced in place without removing any fittings or plumbing.

C22/C23/C24 Series

C22, C23, and C24 Series Hydra-Cell Regulating Valves are available in a choice of stainless steel, nickel alloy or solid brass materials and accommodate 3/4" to 1-1/4" NPT plumbing.

- Heavy-duty construction
- Flow-through design
- Immediate response

C46 Series

C46 Series Valves are available in a choice of stainless steel or solid brass materials and accommodate 3/8" NPT plumbing.

- · Heavy-duty construction
- Flow-through or off-line design
- Quick response

Installation Guidelines

C Series Valves are installed in the discharge line of the pump between the pump and any shut-off device, valve or spray gun. Bypassed fluid should return to the tank or inlet plumbing. Do not install a shut-off device of any kind in the bypass line.

When operating as a pressure-regulating relief valve, 10% of the valve's rated flow should be bypassed at all times. Check the system periodically to ensure this requirement is met. Failure to do so may result in pressure spikes and premature system wear.

When used as a pressure regulator, system pressure will increase approximately 10% when the system is fully bypassed. Consult operating manual for specific ratings.
