50 Hertz Pump & Motor Data

A 3-phase 50 Hertz Motorpump[™] can be obtained in several ways. The most common options are listed below:

- 1. Most 60 Hz pumps available from Scot Pump can be operated on a 3-phase 50 Hz 190/380V power. However, when operated on 50 Hz power, the speed is reduced by approximately 20%, and a significant reduction in performance is realized. The charts below indicate these reductions in performance.
- 2. Pumps will produce the performance indicated in the performance curves when operated on 50 Hz power. The motors for these selections can be obtained through *derated 60 Hz motors* and *wound 50 Hz motors*.

Contact factory for 1 Phase applications.

Derated 60 Hz Motors

The most common practice and readily available method of obtaining a 50 Hz motor is by using the next larger 60 Hz motor and derating it to the desired horsepower on 50 Hz. Many High Efficient motors can be operated on 50 HZ power without a reduction in horsepower. The motor manufacturers 60 HZ nameplate will remain intact. An "Alternate Motor Rating" nameplate indicating the reduced horsepower, RPM, volts, amps, and service factor will be affixed to the pump. In utilizing this practice, service factors may be derated to 1.0. The standard voltage is 190/380V and has a $\pm 10\%$ voltage variation. In addition, 200/400V and 208/416V may be available. Please contact the factory for approval of the rating for your specific application.

Wound 50 Hz Motors

Specially wound 50 Hz 220/380V six-lead Delta Wye motors are available. Most ratings offer a $\pm 15\%$ voltage variation. These motors are not normally a stock item and require an extended lead time.

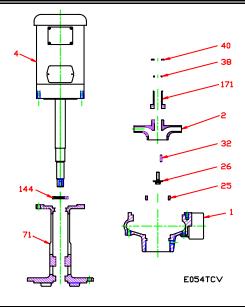

The impeller and horsepower combination sized (taking the reduction in speed into consideration) may not be suitable for operation on 60 Hz power. The increase in speed, performance and load may overload the system and the electric motors. *Pumps sized for 50 Hz operation SHOULD NOT be tested on 60 Hz*.

60 Hz Pump on 50 Hz Power								
No	No Impeller Change							
50 Hz	50 Hz 60 Hz Factor							
GPM =	GPM = GPM x 0.829							
Head =	Head = Head x 0.687							
BHP = HP x 0.569								

To Size 60 Hz Pump Using 50 Hz Data,									
Obtai	Obtain 60 Hz Data As Follows:								
60 Hz	60 Hz 50 Hz Factor								
GPM =	GPM x	1.2							
Head =	Head x	1.45							
BHP =	HP =	GPM x Head x SG of 3960 x Eff							

Change of Speed (RPM)					
	How Varies:	Examples			
GPM	Directly	Double RPM = $(2)(RPM) = (2)(GPM)$ Triple RPM = $(3)(RPM) = (3)(GPM)$			
Head	Square	Double RPM = $(2)(RPM) = (2)^2 = (2)(2) = (4)(Head)$ Triple RPM = $(3)(RPM) = (3)^2 = (3)(3) = (9)(Head)$			
BHP Cube Double RPM = $(2)(RPM) = (2)^3 = (2)(2) (2) = (8)(E$ Triple RPM = $(3)(RPM) = (3)^3 = (3)(3)(3) = (27)(E$					
	Chan	ge of Impeller Diameter (Dia.) Examples			
GPM	Directly	Double Dia. = (2)(Dia.) = (2)(GPM) Triple Dia. = (3)(Dia.) = (3)(RPM)			
Head	Square	Double Dia. = $(2)(Dia.) = (2)^2 = (2)(2) = (4)(Head)$ Triple Dia. = $(3)(Dia.) = (3)^2 = (3)(3) = (9)(Head)$			
BHP	Cube	Double Dia. = $(2)(Dia.) = (2)^3 = (2)(2)(2) = (8)(BHP)$
